

A VISION BECOMES REALITY

On their mission to develop a revolutionary new campus into one of the most important biotech and healthcare innovation centers in the world, Switzerland Innovation Park Basel Area and SENN proudly announce the pre-opening of the Switzerland Innovation Park Basel Area Main Campus. Opening in summer 2022, the campus will offer a state-of-the-art working environment for startups, scaleups and established companies. The official early booking period has started.

Switzerland Innovation Park Basel Area is not only the strategic partner and anchor tenant of the new building; it is also the name giver. The building, formerly known as the GRID, will be called Switzerland Innovation Park Basel Area Main Campus. Meanwhile, construction work is progressing according to plan. The first tenants will be able to move into the building designed by Basel architects Herzog & de Meuron and developed by SENN in summer 2022.

Tenants known so far are Basilea Pharmaceutica AG, Hamilton Bonaduz AG, CSEM and the Department of Biomedical Engineering at the University of Basel. Anyone wishing to secure a space in the Innovation Campus at special conditions can register their interest now.

The Main Campus of the Switzerland Innovation Park Basel Area offers two expansion concepts: on the one hand, companies can rent flexible, furnished spaces with up to 500 square meters. On the other hand, unfurnished space of 500 square meters or more is available, which will be developed according to the specifications of the companies. Around 2,000 people will be able to work on five floors in state-of-the-art offices and laboratories for teaching, research and development. In the middle of it lays the lush heart, a tree-planted courtyard the size of a soccer field, where retail and gastronomy will also be present.

With the Switzerland Innovation Park Basel Area, the neighboring new building of the Swiss Tropical and Public Health Institute, and already resident companies such as Janssen/Johnson & Johnson, Idorsia, Polyphor, Abbott and Skan, the Bachgraben innovation district will contribute to an even stronger cluster for life sciences, biotech, public health and medtech in the Basel Area.
